

Results-oriented Junior Software Developer with over 2 years of experience in building full-stack web and mobile applications in various settings, including internships, hackathons, and professional environments. Proficient in Python, JavaScript, React Native, and FastAPI, with practical experience in cloud deployment and API integration. Demonstrated ability to lead project components, enhance workflows, and deliver client-facing solutions within agile methodologies. Committed to continuous learning and innovation while working in fast-paced, collaborative teams.

EDUCATION

|                                                                              |             |
|------------------------------------------------------------------------------|-------------|
| BSc (Hons) Computer Systems Engineering, <i>University Of Sunderland</i>     | 2023 — 2024 |
| Diploma in Computer Systems Engineering, <i>Botswana Accountancy College</i> | 2020 — 2023 |

TECHNICAL EXPERIENCE

|                                                                                             |                                       |
|---------------------------------------------------------------------------------------------|---------------------------------------|
| Graduate Junior Software Developer, <i>Techno Fairy</i><br><i>Junior Software Developer</i> | Jul 2024 — Present<br><i>Gaborone</i> |
|---------------------------------------------------------------------------------------------|---------------------------------------|

- Collaborated with technical leads to design, develop, and test web applications aligned with user and business requirements, reducing delivery cycle time through proactive issue tracking.
- Led end-to-end development of specific project components, overseeing implementation, testing, and on-time delivery within an Agile/Scrum workflow.
- Developed and deployed a client-facing company website using WordPress, customizing themes and plugins to improve client engagement and online visibility.
- Contributed to mobile application development using React Native, implementing UI components, navigation flows, and third-party API integrations.
- Generated progress reports and tracked enhancements to improve project transparency and stakeholder communication.
- Participated in hackathons and technical workshops, applying new skills and contributing innovative solutions to team projects.

|-------------------------------------------------------------------------------------------------------------|----------------------------------------|
| Software Developer Intern (Industrial Attachment), <i>Spectrum Analytics</i><br><i>Full-Stack Developer</i> | Jan 2023 — Jun 2023<br><i>Gaborone</i> |
|-------------------------------------------------------------------------------------------------------------|----------------------------------------|

- Developed API-driven features with FastAPI, enhancing backend functionality with input validators and security measures.
- Built a user registration interface using Django and containerized services via Docker for cross-platform cloud deployment.
- Designed a MongoDB database with custom classifiers to optimize data management and deployment.
- Planned content schedules in Miro to streamline social media engagement and marketing outreach.
- Designed event info graphics and promotional posters using Figma, boosting audience awareness and participation.

SKILLS

|                        |                                                      |
|------------------------|------------------------------------------------------|
| Languages              | Java, Python, JavaScript, HTML, CSS                  |
| Frameworks & Libraries | Next.js, FastAPI, React Native, Bootstrap            |
| DevOps & Tools         | Microsoft Azure, GitHub, Git, Postman, Docker(basic) |
| CMS & Design           | WordPress, Figma, Canva                              |
| Methodologies          | Agile, Scrum, REST API design                        |
